Intermatic ej600 timer

Installation and User Instructions WARNING Risk of Fire or Electrical Shock • Disconnect power at the circuit breaker(s) or disconnect switch(es) before installing or servicing. • Do NOT recharge, disassemble, heat above 100˚C (212˚F), crush, or incinerate the non-replaceable Lithium battery. Keep out of reach of children. • Do NOT use timer to control devices that could have dangerous consequences due to inaccurate timing such as sun lamps, sauna, heaters and crock pots. • Use #14 AWG wires, rated at least 90°C (194°F) - COPPER conductors ONLY. • Installation and/or wiring must be in accordance with national and local electrical code requirements. Installing the Switch Timer 1. Turn off power at the circuit breaker or fuse and verify that the power is OFF before wiring. 2. Strip wire ends to 7/16". 3. Make wire connections using the twist on connectors provided. 4. Take one of these actions. - If you have a single switch setup, then perform the procedure "Installing the Timer with a Single Switch Setup". - If you have a 3-way switch setup, then perform the procedure "Installing the Timer with a 3-way Switch Setup". Installing Switch Timer with a Single Switch Setup 1. Connect the LINE (Hot) wire from the wall to the black wire from the switch timer with the twist connectors provided. 2. Connect the LOAD wire from the wall to the blue wire from the switch timer with the twist connectors provided. 3. NOTE: Cap the RED wire, which is not used in single-switch installations, with a twist connector. 4. Connect the BARE COPPER wire to the grounding screw in the box If a plastic box, connect to ground as supplied. 5. Connect the NEUTRAL (usually White) wire from the wall to the WHITE wire from the timer. 6. Gently tuck wires into the timer wall box leaving room for the timer. 7. Using screws provided, mount the switch timer into the wall box, then install the wall plate. 8. Turn the power back on at the service panel. 9. Go to "Intro to Programming: Read Before you Begin." Installing the Timer with a 3-Way Switch Setup NOTE: • The distance between switch timer and remote switch must not exceed 100 feet. • The timer must be installed in the wall box that contains the LINE and Neutral wires. The remote switch must be installed in the wall box that contains the load wire ("WIRE C" in diagram 1). 1. Using diagram #1 below, identify the LINE wire previously connected to the COMMON terminal of the old 3-way main switch. 2. Connect the BLACK wire from switch timer to the LINE wire, using a twist connector. 3. Connect the other two wires from the old switch to the BLUE and RED wires from the switch timer. 4. Connect the BARE COPPER wire to the grounding screw in the box. If a plastic box, connect to ground as supplied. 5. Connect the NEUTRAL (usually White) wire from the wall to the WHITE wire from the timer. 6. Using diagram #1 below, identify and remove wire "C" from the "COMMON" terminal of your existing remote switch. DIAGRAM 1: "COMMON" TERMINAL TYPICAL LINE EXISTING 2-SWITCH 3-WAY SETUP MAIN SWITCH 7/16" BLACK WHITE BLUE RED (capped, not connected) BLACK WHITE BLUE RED WIRE "A" WIRE "C" WIRE "B" 3-WAY REMOTE SWITCH DIGITAL ASTRONOMIC TIMER RATINGS: • Single or multiple gang installations • Resistive 12 A • Tungsten 15 A (1800 W) Single Ganged, min 18 in 14 A, Single Ganged, minimum 12.5 in 12 A (1440 W) Multi-Ganged • Ballast 500 VA • Motor - 1/2 Hp • All ratings 120 VAC, 60 Hz. • A Neutral (WHITE) wire must be available to connect to timer. 7. Using diagram #2 remove and reconnect wires "B" and "C" to the "COMMON" terminal of your remote switch, using the supplied piece of jumper wire, if necessary. NOTE: For new construction or to replace a dimmer switch, a lighted switch, or a 3-way switch without screw terminals, a single-pole switch should be used at the remote location, as shown in diagram 3. DIAGRAM 2: 2-SWITCH SETUP, TIMER INSTALL RE-USING EXISTING REMOTE 3-WAY SWITCH DIAGRAM 3: 2-SWITCH SETUP, TIMER INSTALL USING NEW SINGLE-POLE REMOTE SWITCH NOTE: If the building's wiring colors don't allow you to tell wire "A" from "B", just pick one of the two wires and connect as if it is wire "B". After the installation is complete, if the controlled light or device will not turn on properly, simply reverse wires "A" and "B". See Steps 11 through 14 below for how to check. 8. Gently tuck wires into the timer wall box leaving room for the timer. 9. Using screws provided, mount the switch timer into the wall box, then install the wall plate. 10. Turn the power back on at the service panel. 11. Make sure the switch timer displays "MAN" mode. Perform the test in Step 12 with the remote switch in each of its 2 positions. 12. Press the NEXT/ON/OFF button on the switch timer several times. Each time that you push the NEXT/ON/OFF button, the controlled light or device (the "load") should turn on or off. If so proceed to Step 14. 13. If the controlled light or device does not turn on or off, take one of these actions. - If the timer clicks but the load does not operate, re-check your wiring and make sure the load is functional. - If the timer clicks but the load only operates when the remote switch is in one of its 2 positions, you need to turn off the power at the service panel, then reverse wires "A" and "B". You can reverse wires "A" and "B" at the remote switch box, or you can reverse wires "A" and "B" where they connect to the red and blue wires of the switch timer. Then wait for the LOAD turn power back on at the service panel and repeat Step 12. 14. Verify that the controlled load turns on or off each time that the NEUTRAL remote switch is operated. Your timer is ready to be set. 15. Proceed to Intro to Programming. MODEL EJ600 SERIES LINE BLUE WIRE "B" BLACK NEUTRAL TIMER WHITE RED WIRE "A" NOT USED REMOTE SWITCH LINE BLUE WIRE "B" BLACK NEUTRAL TIMER WHITE RED WIRE "A" SINGLE-POLE REMOTE SWITCH (295 cm) 3 3 (205 cm) 3 3 LOAD NEUTRAL WIRE "C" JUMPER "COMMON" TERMINAL 3-WAY LOAD NEUTRAL WIRE "C" JUMPER ALL NEW EJ600 Series In-wall timer combine the easy programming of the EJ500 with the more robust features of the ST01. Adding the ability to control CFL and LED, this In-Wall Timer can handle all of your lighting configurations and scheduling needs. Up to 14 ON/OFF events per week. "Random" setting turns light ON and OFF at slightly different times each day. Auto daylight saving time adjustment. Incandescent/Fluorescent/CFL/LED compatible. Astronomic feature auto adjusts to sunrise/sunset. Can be used for 24-hour or 7-day load control of lights, fans, pumps and other medium-duty loads. Built-in rechargeable Lithium ion battery backup. Single-pole or 3-way compatible. mainSetting Daylight Saving Time EJ500-EJ600 Programmable TimerWatch VideoAdjusting the Astronomic Feature for EJ500-EJ600 Programmable TimersWatch Video Home control & automation relay & timers digital timers This website uses cookies to ensure you get the best experience on our website. Read more © 1996-2014, Amazon.com, Inc. or its affiliates Whether you're looking to reduce your impact on the environment, or just the impact on your wallet, light timers are an effective way to control energy consumption. Knowing how to program a light timer makes it possible to set lighting to meet your daily demands, and it's easy to do.Before You BeginBefore you begin installing and programming a light timer for the first time, it's worth doing a few simple checks to ensure your lighting system is operating correctly. You don't want to spend hours trying to figure out why your light timer isn't switching on the lights, only to find out later that you have a faulty bulb. Before adjusting any settings on the timer:Test your lights and switches to ensure they're operating correctly. Replace any bulbs as necessary. Install the timer, and switch on any attached lights. If you're using a wired timer, seek the assistance of a professional electrician to complete the installation for you. Programming a Manual TimerLost your Utilitech or Grasslin timer instructions? Don't worry. Most manual timers operate on a very similar dial, and it's relatively straightforward to figure out how to program a light timer even if you don't have the user manual.Check that the attached lights are on, and set the manual timer to the "T" position. Set the current time on the clock. Push down the tabs around the edge of the clock that represent the times when you would like the lights to switch off. Test your settings by adjusting the time on the clock to match one of the times when you want the timer to activate. If everything is functioning correctly, reset the clock to the current time to complete the installation. Programming a Digital TimerDigital timers don't have a dial mechanism. Instead, they use a series of buttons to set the day and time. Usually, the buttons are labeled, and the process is quite straightforward, but if you're having trouble, refer to your user manual. If you've lost your manual, you may be able to find a downloadable copy online. Simply use your search engine to perform a query such as "Utilitech timer instructions" or "Grasslin user manual download."Do You Need a Light Timer?Now you know how to set a light timer; but do you really need one? It depends on how frequently you're at home and how often you forget to turn lights off. Timers are a good way to control how much electricity you use, ensuring lights you forget to switch off don't stay on all night. Furthermore, they're an excellent way to make it look like an empty property is occupied, thereby deterring criminals.Installing and Operating a Timer SafelyLight timers that plug directly into an outlet are easy to use and don't require any kind of electrical knowledge. However, it's still important to read the user manual carefully and to avoid tampering with the device such as removing the casing to expose the internal wires and circuit boards.If you want to install a timer switch that you have to wire into a switch panel, you should only attempt the task if you're an electrician. If in doubt, seek the advice of a trained professional. MORE FROM QUESTIONSANSWERED.NET
